~~Plugin~~

Plugin $\Rightarrow$ add on features.

small automate $\Rightarrow$ use $\Rightarrow$ Jenkins.

New Item

Give Job name

Choose freestyle project

Give description $\Rightarrow$ if need or not.

Source Code management $\Rightarrow$ check out and give the repo url.

Add credentials $\Rightarrow$ username password.

Branch $\Rightarrow$ */main

Build step $\Rightarrow$ windows batch Command $\Rightarrow$ ^{Type the Command here} dir

Then click build now

Triggers :

Trigger builds remotely $\Rightarrow$ automatically build.

deploy $\Rightarrow$ image vahi container a direct a launch
Pandora.

GitHub Container Registry $\Rightarrow$ images are stored

Personal Access Token $\Rightarrow$ controlled access

Create process

Profile $\Rightarrow$ Settings $\Rightarrow$ Developer settings $\Rightarrow$ PAT $\Rightarrow$ create

Generate new Token $\Rightarrow$ (classic) token $\Rightarrow$ give NOTE $\Rightarrow$ Enable

the write ranges

docker login ghcr.io -u github username

docker tag jenkins-test:latest ghcr.io/Ragavi Rajakumar/jenkins-test:latest

→ image name

→ tag: latest

docker images.

→ Github username

Rename the image properly.

docker push ghcr.io/Ragavi-Rajakumar/jenkins-test:latest

It show the Github packages. ⇒ Image show in the Github packages.

Image ⇒ How to convert the private into public.

once the image convert the public after it is not again convert the private.

docker pull ghcr.io/~~github~~username/jenkins-test:latest
