

- PS C:\Users\rajak\OneDrive\Desktop\docker practice> terraform init
Terraform initialized in an empty directory!

The directory has no Terraform configuration files. You may begin working with Terraform immediately by creating Terraform configuration files.

- PS C:\Users\rajak\OneDrive\Desktop\docker practice> cd '.\terraform practice\'
- PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform init
Initializing the backend...

Initializing provider plugins...

- Reusing previous version of hashicorp/aws from the dependency lock file
- Using previously-installed hashicorp/aws v6.67.0

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

- PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform validate
Success! The configuration is valid.

PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform plan

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

```
# aws_iam_user.rag will be created
+ resource "aws_iam_user" "rag" {
  + arn           = (known after apply)
  + force_destroy = false
  + id           = (known after apply)
  + name          = "Ragav"
  + path          = "/system/"
  + tags          = {
    + "tag-key" = "hands-on"
  }
  + tags_all      = {
    + "tag-key" = "hands-on"
  }
  + unique_id     = (known after apply)
}
```

Plan: 1 to add, 0 to change, 0 to destroy.

Note: You didn't use the -out option to save this plan, so Terraform can't guarantee to take exactly these actions if you run "terraform apply" now.

```
PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform apply
```

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:

+ create

Terraform will perform the following actions:

aws_iam_user.rag will be created

```
+ resource "aws_iam_user" "rag" {
  + arn                = (known after apply)
  + force_destroy      = false
  + id                 = (known after apply)
  + name               = "Ragav"
  + path               = "/system/"
  + tags               = {
    + "tag-key" = "hands-on"
  }
  + tags_all           = {
    + "tag-key" = "hands-on"
  }
  + unique_id          = (known after apply)
}
```

```
PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform apply
```

```
+ path          = "/system/"
+ tags          = {
  + "tag-key"    = "hands-on"
}
+ tags_all      = {
  + "tag-key"    = "hands-on"
}
+ unique_id     = (known after apply)
}
```

Plan: 1 to add, 0 to change, 0 to destroy.

Do you want to perform these actions?

Terraform will perform the actions described above.

Only 'yes' will be accepted to approve.

Enter a value: yes

aws_iam_user.rag: Creating...

aws_iam_user.rag: Creation complete after 1s [id=Ragav]

Apply complete! Resources: 1 added, 0 changed, 0 destroyed.

```
PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> 
```

IAM users (3) [Info](#)

Delete user

Create user

An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.

PS C:\Users\rajak\OneDrive\Desktop\docker practice\terraform practice> terraform destroy
- name = "Ragav" -> null
- path = "/system/" -> null
- tags = {
  - "tag-key" = "hands-on"
} -> null
- tags_all = {
  - "tag-key" = "hands-on"
} -> null
- unique_id = "AIDA3S4YCKOWBNXOQ2XXL" -> null
# (1 unchanged attribute hidden)
}
```

Plan: 0 to add, 0 to change, 1 to destroy.

Do you really want to destroy all resources?

Terraform will destroy all your managed infrastructure, as shown above.
There is no undo. Only 'yes' will be accepted to confirm.

Enter a value: yes

```
aws_iam_user.rag: Destroying... [id=Ragav]
aws_iam_user.rag: Destruction complete after 1s
```

Destroy complete! Resources: 1 destroyed.

```
