

01/10/26

Day - 6

Iac $\Rightarrow$ Infrastructure as Code $\Rightarrow$ automate the code then create infra

Terraform $\Rightarrow$ 3rd party tool.

$\hookrightarrow$ we can communicate cloud providers $\Rightarrow$ like AWS, Azure, Oracle

manifests.

actual state $\Rightarrow$ current state.
desired state $\Rightarrow$ what I need.

C2I login $\Rightarrow$ secret key. (or) access key.

Terraform:

terraform $\Rightarrow$ It will be show terraform all commands.

install the aws cli

aws --version

Terraform is IAC Platform for
aws, gcp, azure, ...

Project 1

How to containerize the application $\Rightarrow$ ~~but but but~~
build in the Jenkins
Push github
Container file.
Push to Docker.

build docker file using Jenkins!

Create Access key

Go to security Credentials

then Access key

Use case $\Rightarrow$ C2I

then create access key

aws configure

registry.terraform.io $\Rightarrow$ terraform official site.

$\hookrightarrow$ main parts under the resources

cd '.\terraform practice\'

1. terraform init

Create IAM user using terraform

Go to the terraform documentation

Search the iam $\Rightarrow$ click aws-iam-user

Copy the resource

Paste inside the provider.tf file

changes:

name = "siddharth"

path = "/"

tags = {

purpose = "hands-on"

required_providers {

aws = {

source = "hashicorp/aws"

version = "~> 6.0"

}

open the terminal

2. terraform validate $\Rightarrow$ check the code

3. terraform plan $\Rightarrow$ before building infrastructure it explain the changes will be occur.

4. terraform apply $\Rightarrow$ apply the script to aws

5. terraform destroy $\Rightarrow$ delete the created IAM

Automatically apply terraform without typing 'yes'

terraform apply --auto

terraform.tfstate $\Rightarrow$ metadata, save the information

.tf file $\Rightarrow$ script

Create AMI id.
